About Quantum Genomics

Quantum Genomics is a biopharmaceutical company specializing in the development of a new class cardiovascular drugs based on the Brain Aminopeptidase A Inhibition (BAPAI) mechanism. It is the only company in the world to pursue this innovative approach directly targeting the brain, founded upon more than twenty years of research work by Paris-Descartes University and the INSERM/CNRS laboratory led by Dr. Catherine Llorens-Cortès at the Collège de France. Quantum Genomics thus aims to develop innovative treatments for complicated or even treatment-resistant hypertension (in approximately 30% of patients it is poorly controlled or treatment failure occurs), and heart failure (one in two patients diagnosed dies within five years).

Based in Paris and New York, the company is listed on the Euronext Growth market in Paris (FR0011648971 - ALQGC) and is registered on the US OTCQX market (symbol: QNNTF). Find out more at www.quantum-genomics.com, or on our [Twitter](#) and [LinkedIn](#) accounts
