

PRESS RELEASE

First images of new Smart Salem digital medical center in DIFC and confirmation of August 2022 opening

Dubai and Paris, June 2nd, 2022

Visiomed Group (FR0013481835 - ALVMG), a group specializing in innovative healthcare technologies and services, presents progress made and initial images of its wholly-owned subsidiary Smart Salem's future digital medical center.

See a video presentation of the future center:

In 2020, Smart Salem opened the first digital center offering medical fitness tests, which are required for obtaining residence and work visas in the United Arab Emirates. This unique and innovative service is accredited by the [Dubai Health Authority](#) (DHA) and the [General Directorate of Residency and Foreigners Affairs](#) (GDRFA).

The second Smart Salem medical center is currently under development in the prestigious Index Mall shopping center located in Dubai's financial district, the Dubai International Financial Center or DIFC. The new medical center will have an area of nearly 1,000 m², much greater than the current center in City Walk and therefore able to accommodate a larger number of patients on a daily basis.

The project has made significant progress over the last few weeks and has reached several key milestones: the design and architectural plan have now been completed. All of this work was carried out by GHD Group, an Australian international group specializing in engineering and architecture projects, particularly in the medical sector. During this phase, detailed renderings of the center were created, including a 3D video (see link above) and photos (see bottom of press release PDF version) offering a detailed view, subject to future improvements, of the organization of the center and the proposed patient experience.

"The guiding principle for our new center was to go beyond the practical utility of a medical establishment. We are going to create an exceptional Medical Fitness experience. The center will seamlessly blend the best medical technologies with the most efficient data processing processes in order to produce a unique customer experience." Sanjay Verma, Smart Salem's new CEO.

The new center will incorporate the cutting-edge technology that is the hallmark of Smart Salem, including robotics and artificial intelligence, as well as new innovations not found in any other medical center in Dubai.

The project is going ahead according to plan and all the required permits have been obtained from the DIFC and the DHA. The DHA was consulted extensively during this design phase and will continue to provide support during the subsequent phases of the project.

Fit-out work is due to begin in June 2022 and the center is scheduled to open in August 2022, as announced by Visiomed Group on May 25th, 2022 to coincide with the presentation of its strategic plan¹.

About VISIOMED GROUP

Founded in 2007, VISIOMED GROUP relies on a long experience in the health sector to invest in innovative health technologies and services in France and abroad.

The Group now has two wholly-owned subsidiaries:

- **BewellConnect, created in 2014, pioneer in connected health and teleconsultation solutions**

BewellConnect offers an enriched technological universe, both in medical devices and software, making it possible to respond to all telehealth use cases: enriched and assisted teleconsultation, home telemonitoring, hospital monitoring, tele-expertise, teleassistance and tele-regulation.

BewellConnect's flagship product, VisioCheck, is the first telemedicine station weighing less than 300g for healthcare professionals, available in a case, station or modular health space.

BewellConnect is now deploying its solutions in France and abroad.

- **Smart Salem, the first digital medical analysis center accredited by the Dubai Ministry of Health (DHA) in the United Arab Emirates**

The Smart Salem offer is based on know-how in medical analysis, radiology and data analysis and processing to detect nearly 35 diseases in 7 minutes in a patient (in particular HIV, hepatitis and tuberculosis) by offering reliable results, readability and exceptional patient experience enabled by advanced artificial intelligence and virtual reality technologies.

Smart Salem's "Medical Fitness Assessment" offer resulting from this know-how thus makes it possible to obtain a residence or work visa in the space of 30 minutes compared to 10 to 15 days in historical health centers.

Smart Salem is a technological platform offering many growth opportunities, as shown by the opening of the second center in Dubai in September 2022 and the authorization received for the opening of a third center, planned to open in the first quarter of 2023.

Based in Paris, VISIOMED GROUP is listed on Euronext Growth (ALVMG). More information on visiomed.fr, smartsalem.ae and www.bewell-connect.com.
